Re: AT&T Response to Request for Additional Information to the Final Report of the
Working Group – GPS Overload/Desensitization

Dear Mr. Knapp,

AT&T received a copy of your August 12, 2011 Request for Additional Information letter addressed to the Working Group that was formed to study the issue of GPS overload/desensitization from LightSquared terrestrial operations. Jeff Carlisle and Charlie Trimble forwarded a copy of the letter to the other GPS Working Group participants. After reviewing the letter, it is AT&T's view that the handset and equipment manufacturers are best suited to respond to your letter.

In that vein, I have forwarded a copy of the letter to those manufacturers who did not participate in the Working Group but whose devices were submitted by AT&T for testing. We have asked them to respond directly to the FCC with the requested information as quickly as possible.

Please note that the 10 devices submitted by AT&T for testing—only 9 of which were actually tested—represent a very limited subset of the hundreds of 3G AGPS devices that are used on AT&T's network. They were selected to reflect a range of AGPS chipsets used on our network and they do not represent an exhaustive portfolio of the devices that operate on AT&T's network.

Please do not hesitate to contact me if you have any additional questions.

Sincerely,

/s/ Joseph P. Marx
Assistant Vice President, AT&T Services Inc.
